

A research project takes shape

Week of 21-27 September 2026 · Melbourne

Matthew · editorial narration. Reconstruction from repository records and retrieved reports. Repository dates record changes; they do not establish the first-ever work or prove that added tests passed.

01 26 September

By this point, my project has a research repository and a clear rule: count every required byte and restore the input exactly.

02 26 September

I read changes for composition coding, streaming and round-trip tests. Added tests are a written milestone, not a pass result.

03 26 September

Compress
Restore

I see familiar compress-and-restore commands enter the research record.
[Command-line work recorded](#)

04 27 September

The architecture in this part of my record turns toward input-derived statistics.
[Direction of this version](#)

05 27 September

I read a small-corpus report with a narrow win on one text file and losses elsewhere.
