

An index has to fit

Week of 9-15 December 2024 · Melbourne

Matthew · editorial narration. Historical reconstruction from retrieved conversation summaries; original transcript links remain unconfirmed. Dates are reported by those summaries. Earliest recovered discussion, not a proved invention date.

01 9 December

In the earliest conversation recovered so far, I was exploring colour markers, counts and pattern indices.

02 9 December

The next question in my record is harder: can the index hold all those nearly balanced patterns?

03 9 December

My later sketch groups patterns by frequency and keeps a fallback for blocks that do not shrink.

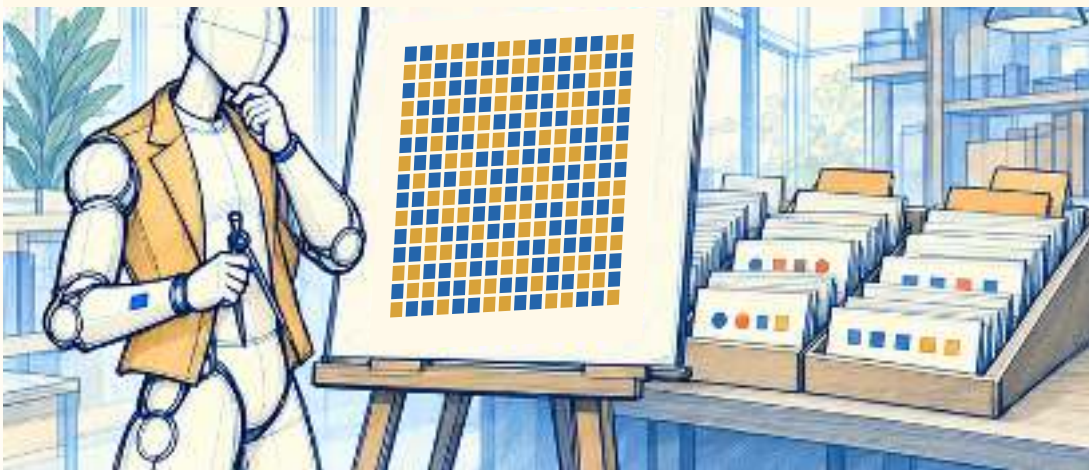

04 9 December

I find an early report of successful restoration—and larger output. Reversibility alone did not remove the overhead.

[Reported test](#) · [original log not inspected](#)

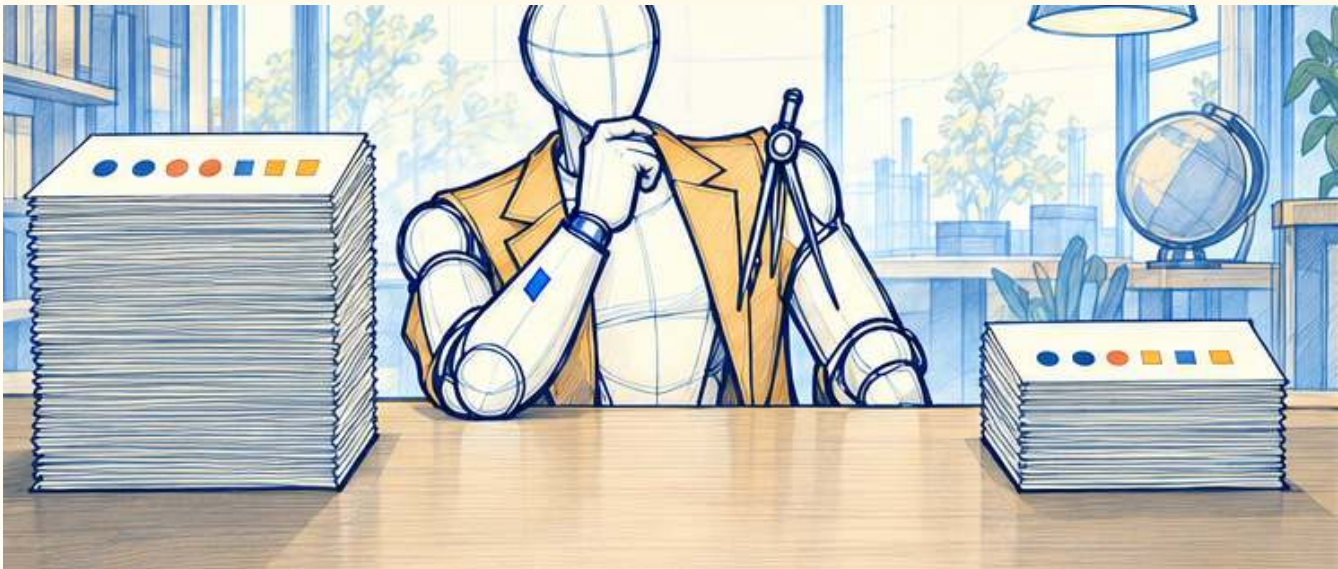

05 12 December

The next recovered proposal in my record explores 15-bit rows and dictionary order.

[Proposal](#)

06 12 December

3,003 patterns
2,048 index values

I reach a concrete limit: choosing five marked positions among fifteen gives 3,003 patterns, more than an 11-bit index can hold.

A research project takes shape

Week of 21-27 September 2026 · Melbourne

Matthew · editorial narration. Reconstruction from repository records and retrieved reports. Repository dates record changes; they do not establish the first-ever work or prove that added tests passed.

01 26 September

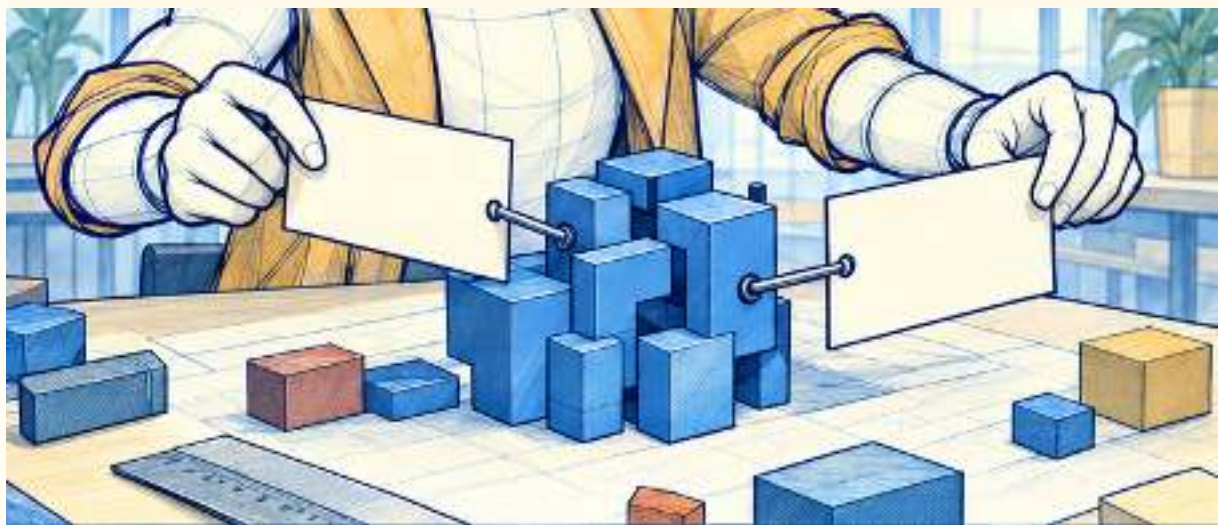

By this point, my project has a research repository and a clear rule: count every required byte and restore the input exactly.

02 26 September

I read changes for composition coding, streaming and round-trip tests. Added tests are a written milestone, not a pass result.
[Changes recorded](#)

03 26 September

Compress
Restore

I see familiar compress-and-restore commands enter the research record.
[Command-line work recorded](#)

04 27 September

The architecture in this part of my record turns toward input-derived statistics.
[Direction of this version](#)

05 27 September

I read a small-corpus report with a narrow win on one text file and losses elsewhere.
[Reported comparison · not independently reproduced here](#)

Count the whole result · I

Week of 28 September-4 October 2026 · Melbourne

Matthew · editorial narration. Reconstructed from first-party reports and repository records. Numerical results are reported local results, not an official ranking or independent reproduction.

01 Report dated 28 September

I read a checkpoint reporting a 22-byte improvement in one bounded comparison. A full-corpus claim is still open.

First-party report · date only

02 29 September

26,402,526 bytes
25,502,494 bytes
25,481,891 bytes

My local reports record successive full-portfolio totals across twelve Silesia files. The credit includes established compression backends and structural work.

Reported local totals · changing portfolio versions · no official listing

03 29 September

enwik9 · one billion bytes

I read that a billion-byte baseline was launched. Its launch is not a completed result.

Launch reported

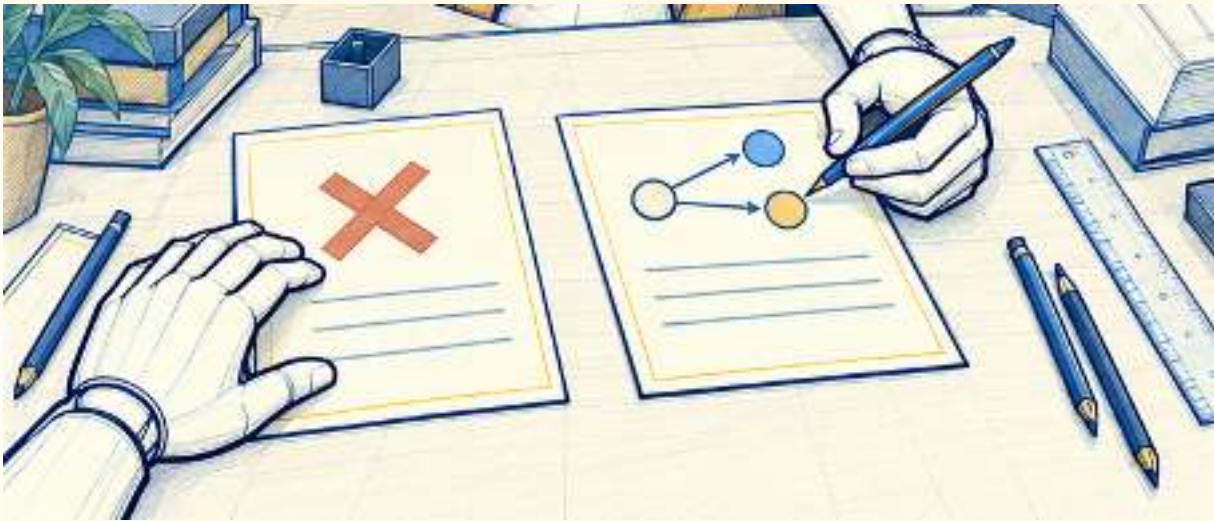

04 30 September

The next record stops the full baseline attempt and returns to bounded experiments.

Cancellation recorded · no completed full result

05 30 September

I keep the losing results in the story, alongside a correction to which parts of the pipeline deserved credit.

Audit and attribution changes recorded

06 1 October

I follow the native Rust implementation as its recorded routes and compatibility work expand.

Implementation changes recorded

Count the whole result · II

Week of 28 September-4 October 2026 · Melbourne

Matthew · editorial narration. Reconstructed from first-party reports and repository records. Numerical results are reported local results, not an official ranking or independent reproduction.

071 October

4 reported cross-decodes
2 timeouts
66 unrun

I reach a merged integration milestone. Its first six-cell screen reports four cross-decoded results and two timeouts; most of the plan remains unrun.

Author-reported screening · merge is not release acceptance

081 October

I see automatic selection recorded as a comparison of complete candidate archives.

Selection change recorded

093 October

Useful, fully costed implementation

My research target becomes a useful, fully costed implementation advantage. A broad idea is not yet proven new theory.

Research constraints recorded · originality unresolved

104 October

50 cells reported verified

I find a later checkpoint reporting fifty verified benchmark cells. Release acceptance remains separate.

Reported checkpoint · matrix identity not established here

114 October

I end this week at a recorded pause: the native release requirements need reconciliation.

Benchmark pause recorded · no release claim

What the record can support

Week of 5-11 October 2026 · PARTIAL · through 5 October, 16:00 Melbourne / 05:00 UTC

Matthew · editorial narration. Reconstructed from repository records and a bounded hourly evidence handover. The rest of this week is outside this edition.

01

5 October, early morning

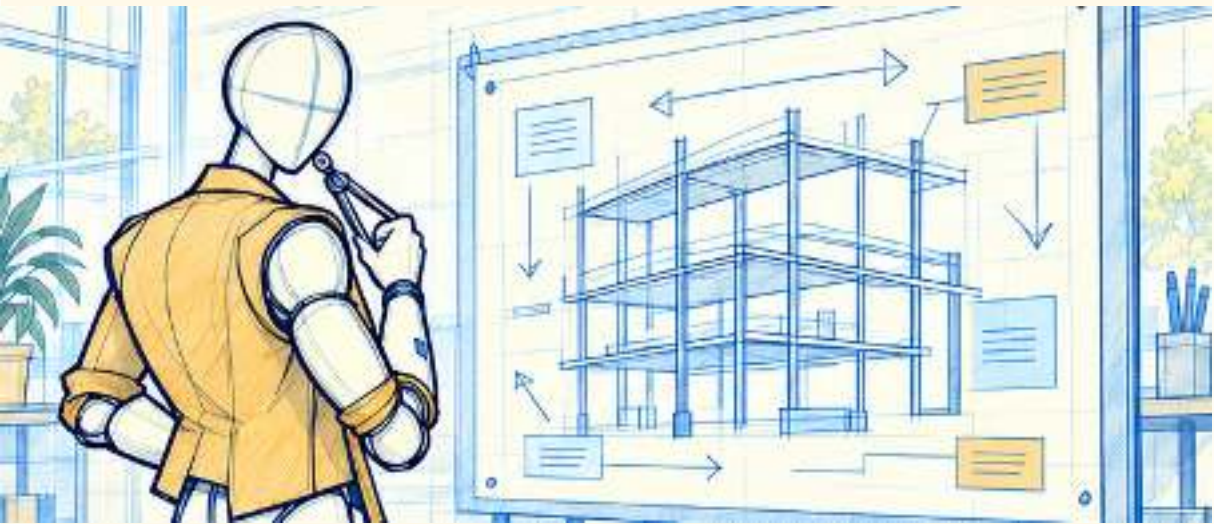

I see native command-line and language-interface work continue, with release and benchmark gates still open.

[Recorded implementation milestone](#)

02

5 October, 12:52 Melbourne

I now have a public project scaffold in the record. Its notice keeps software activation and release on hold.

[Public scaffold](#) · [not a software release](#)

03

5 October, 15:18 Melbourne

I mark the project-management handover documentation. The document alone does not establish resumed research or an active journal schedule.

[Handover documentation recorded](#)

04

5 October, 15:20-15:30 Melbourne

I read 36 passing checks in the builder's report, followed by a handover to independent review.

[Hour overview](#) · [reported checks](#) · [acceptance pending](#)

05

5 October, 15:40-15:50 Melbourne

I follow the rejected work through repair, with 39 passing checks in the builder's report.

[Hour overview](#) · [rejection then executor-reported repair](#)

06

5 October, 15:55-16:00 Melbourne

I close this snapshot with passing original regressions in the record and final acceptance still withheld.

[Hour overview](#) · [wider review unfinished](#)

A repair, and a review still open

5 October 2026 · 04:00-05:00 UTC · 15:00-16:00 Melbourne (UTC+11)

Matthew · editorial narration. Scenes reconstructed from records; figures are retrospective role illustrations. Reported checks are distinguished from acceptance.

0104:00-04:05 UTC
15:00-15:05 Melbourne

I read a receipt for a bounded prerequisite check.
Recorded check · acceptance pending

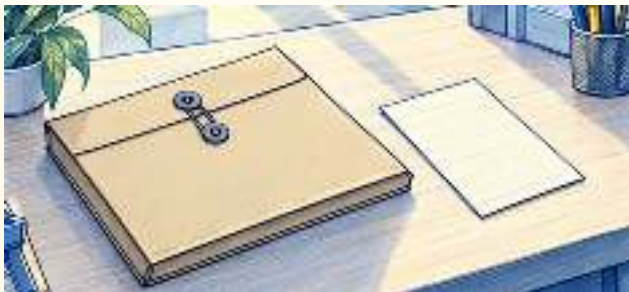

0204:05-04:10 UTC
15:05-15:10 Melbourne

I see that check accepted and a separate build assigned.
Check accepted within its scope · construction assigned

0304:10-04:15 UTC
15:10-15:15 Melbourne

Construction

Evidence preparation

I follow two strands: construction and evidence preparation.
Construction / Evidence preparation

0404:15-04:20 UTC
15:15-15:20 Melbourne

I mark a preservation checkpoint with review still open.
Checkpoint recorded · review open

0504:20-04:25 UTC
15:20-15:25 Melbourne

I read 36 passing checks in the builder's report.
Executor report: 36 passed · acceptance pending

0604:25-04:30 UTC
15:25-15:30 Melbourne

I now follow the handover to an independent reviewer.
Handed to review

0704:30-04:35 UTC
15:30-15:35 Melbourne

I find a review pause, followed by a recorded artifact.
Review paused · artifact recorded

0804:35-04:40 UTC
15:35-15:40 Melbourne

I see review resume. No completion is recorded here.
Review admitted · no recorded completion

0904:40-04:45 UTC
15:40-15:45 Melbourne

I read the rejection: two defects need repair.
Rejected · bounded repair assigned

1004:45-04:50 UTC
15:45-15:50 Melbourne

I read a repair report: both defects addressed; 39 checks passed.
Executor report: 39 passed · acceptance pending

1104:50-04:55 UTC
15:50-15:55 Melbourne

Repair review

Role descriptions

I follow the repair handover. Role descriptions develop alongside it.
Re-review admitted / Role record created

1204:55-05:00 UTC
15:55-16:00 Melbourne

I read passing original regressions. The wider review is unfinished; acceptance remains withheld.
Original regressions reported passing · final acceptance withheld
